Personal Sites in Campus Pack™

Campus Pack includes a dynamic personal website builder and blogging tool. Highly flexible and easy to configure, this tool allows users to create interactive websites and share them with peers and colleagues.

With Campus Pack, users can

- Easily create and maintain multimedia blogs and wikis
- Create and share content highlighting personal interests and achievements
- Collaborate with others on projects or research
- Manage which audiences can view and contribute to different areas of their sites

Achieving Success with Porfolios

To encourage adoption, initial development of portfolios is required for students taking *College 101*, a freshman orientation course designed to help individuals acclimate to the college environment. These students upload work into their Campus Pack personal spaces from the outset and continually refine their sites as their college tenure advances.

As the sites evolve, students highlight their best work, summarize academic goals and plans of study, write about their selection of a major, capture cross-cultural experiences, and assess career readiness. They can integrate essays, poetry, original artwork, annotated resumes, and a range of projects that represent who they are as students and emerging scholars.

"As we progress with our use of Campus Pack, we envision each student having a living record of their successes throughout their college years. It's an ideal tool to support students through college admissions, courses, co-curricular activities, experiential learning, and career development," concludes DiGennaro.
