

# Case study: Campus Pack improves learning (and saves trees) at Southeast Technical Institute

---

## The Challenge

Southeast Technical Institute (STI) provides medical and business training in day and evening classes. Their Principles of Investment class needed a new and easy way to manage student projects that would eliminate outdated, bulky printed binders. They tested several tools, but found most of them confusing and unintuitive.

---

## Why Campus Pack?

Campus Pack provides an easy-to-use way for instructors to review students' work, anytime, anywhere through a convenient integration with Jenzabar's LMS. With Campus Pack, every student can:

- › Create a personalized portfolio of academic work, group activities and organizational involvement
- › Share with instructors, staff, classmates, and colleagues, both inside and outside the campus community
- › Build wikis, blogs, journals, and audio/video podcasts
- › Publish interactive presentations
- › Showcase personal interests and achievements

---

## How's it going?

The instructor created a simple template and guidelines, and gave both to all students. Students followed unique links to their Personal Learning Pages, and got straight to work - no other training needed.

STI also found other valuable uses for Campus Pack. For example, instructors in the Early Childhood course used Campus Pack to organize course practicum scheduling with other departments on campus, and STI administrators built sites for creating and collaborating on technical resources and committee assignments.
